EDUCATION

2022 to 2025
Bachelor of Science in Information Technology
Yllana Bay View College, Inc.

CERTIFICATES

October 9, 2025
Overall Champion, Graphic Designing Competition
Cyberian Day 2025, YBVC College of Computer Education

August 30, 2025
Virtual Assistant Social Media Marketing Course (15 hours)
Freelance Academy

Intensive Online Freelance Design Workshop
Master Logo PH

CORE SKILLS

- Full stack web development
- Database design (MySQL)
- IoT and embedded systems (ESP32)
- Sensor wiring and calibration
- Mobile apps (Flutter, Firebase)
- Secure login and user roles
- Reports, payments and alerts
- Deployment and staff training
- UI layout and graphic design

LANGUAGES

English, Filipino (Taglish), Bisaya

PROFILE SUMMARY

BSIT student and full stack developer who builds complete systems, from the database and web dashboard down to the ESP32 hardware and wiring. I have built and tested a city library system, a farmer marketplace with four user roles and online payments, a GPS child safety tracker and several IoT monitoring systems. I focus on secure, practical systems that small businesses and organizations can use from day one and I hand them over with documentation and training.

SELECTED PROJECTS

FarmDirect Dumalinao — PHP · MySQL · Bootstrap · PayMongo
Farmer to buyer marketplace with four roles (Customer, Farmer, Rider and Admin) featuring a product catalog, cart and checkout, GCash and card payments, rider delivery, order tracking, inventory logs and sales reports.

Pagadian City Library System — PHP · MySQL
Library system with an admin side and a borrower portal. Admin handles per copy serial tracking, borrowing and returns, members, logbook and Excel reports. Borrowers browse the catalog, reserve books for approval and view their loans and fees. Secured with CSRF protection and login lockout.

SafeTrack GPS Child Safety Tracker — ESP32 · Flutter · Firebase
ESP32 tracker with a GPS module and an A7670C cellular module, plus a parent mobile app with real time location and geofencing.

Energy Meter for Current, Voltage & Cost — ESP32 · PHP · MySQL
Three channel kWh meter using ACS712 and ZMPT101B sensors, with live readings, monthly usage charts, estimated bills and a printable cost statement.

LumiSense Smart Streetlights — ESP32 · PHP · MySQL
Streetlight monitoring with fault detection, remote light control, location map, maintenance records and power billing.

Heat Stress Monitoring System — ESP32 · PHP · MySQL
Temperature, humidity and wind sensing turned into a heat index with Safe, Warning, Danger and Critical alerts, history and CSV export.

Other IoT Systems — ESP32 · PHP · MySQL
CondiVend condiments vending machine, an automated egg incubator and a scheduled quail feeder, each with its own web dashboard and reports.

TECHNICAL SKILLS

Web	PHP, MySQL, JavaScript, HTML, CSS, Bootstrap 5, Python (FastAPI)
Mobile	Flutter, Firebase
IoT	ESP32, Arduino IDE, ACS712, ZMPT101B, DHT22, DS18B20, DS3231 RTC, ultrasonic sensors, relays, servos, I2C LCD
Security	Password hashing, CSRF protection, login lockout, role based access
Tools	XAMPP, phpMyAdmin, Git and GitHub, VS Code, Hostinger, cPanel
Design	Adobe Photoshop, Illustrator, Canva

WORK EXPERIENCE

Freelance Graphic Designer — **2023 to Present**
Self employed, Fiel Custom Graphics

- Design posters, tarpaulins, invitations, sublimation layouts and branding for print and digital clients, which also shapes the clean layouts of my web dashboards.
